

Practical 10

Aim: Finding Location and IP Address

(1) open <https://grabify.link/>

and enter a valid url that will be opened when the user will click on your link which you have send.

And after that click on create URL.

2. After that a dummy link will be generated which you can send to anyone to track their location and IP Address. A page like this will be displayed below.

The screenshot shows the Grabify IP Logger website. The 'LINK INFORMATION' section is visible, with the following details:

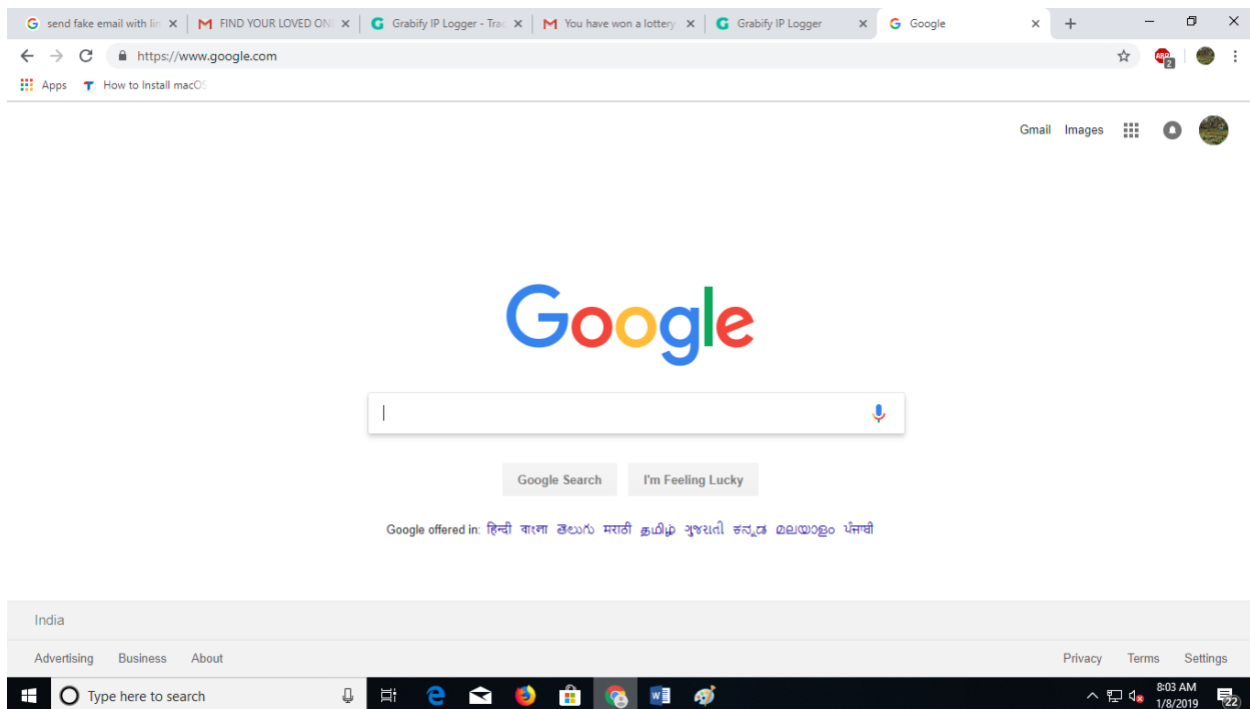

Select Domain Name:	Click here
(All custom links will stay active)	
Original URL	http://www.google.com
New URL	Copy https://grabify.link/BWK85K Change domain/Make a custom link
Other Links	View Other link Shorteners
Tracking Code	ZV2DRF
Access Link	https://grabify.link/ZV2DRF
Smart Logger	<input type="checkbox"/>
Note	Please login or register to create a note.

(3) Copy and paste the link in your email which you will be sending to the user. For eg:
And when the user will click that link another webpage will be opened (the URL which you have specified) and you can track the location and IP Address of the user

The screenshot shows a Gmail inbox. The email from Karthik Konar is selected, and the body text is visible:

You have won a lottery of 2000 rs. please click on the link to claim your prize <https://grabify.link/BWK85K>

(4) When the user clicks on that link www.google.com will be opened because we had given that as our referring URL

(5) After The User Has clicked on the link you will be able to track their location and IP Address
